

Ear Protection

The ear protector chosen should provide enough attenuation to protect your hearing but consideration should also be given to it's compatibility with other items of PPE being worn such as safety glasses.

Attenuation is the process of losing noise energy and it is the attenuation data that should be examined when selecting appropriate ear defenders.

The Single Number Rating or SNR value can be used to compare the level of noise attenuation offered by different hearing protectors.

The higher the SNR, the higher the level of noise attenuation or protection is provided by the hearing protection.

To determine acoustic pressure on your ears, subtract the SNR value from the average noise level that has been measured during the risk assessment. For example:

TIMCO's foldable ear defenders (770390) have a SNR of 30.4 dB.

Warning: Reducing sound to a lower level than normal talking may be a safety risk.

Ear Defenders

Foldable Ear Defenders

SNR 30.4 dB Noise level reduction

CE Approved to EN 352-1:2002

Ideal for long comfortable use in medium sound environments.
