

## Lever on Rose

---

### Fitting Door Handles

Please be aware that the following instructions are post installation of a latch.

1. Insert spindle through latch and push door handles flush with the door. Ensuring they are level, mark the fixing holes on both sides of the door with a bradawl or small drill bit. Depending on the thickness of the door, the spindle may need to be cut to the required size. Make sure grub screw is loosened to allow spindle to move.
2. Remove the door handles and spindle.
3. Drill pilot holes for wood screws and bolt through fixings at 3 and 9 o'clock.
4. Reposition the door handles on each side of the door. Using a screwdriver, fix the backplate onto the door.

**Note:** Using an electric screwdriver may damage screws and/or backplate. If bolt through fixings are being used make sure a suitable latch with fixings holes are used.
